

Re Drilling in the Arctic National Wildlife Refuge:  
Global Climate Disruption is the most serious  
issue our world has ever faced. Even the U.S.  
Military acknowledges the threat. We must stop  
enabling fossil fuel infrastructure. These  
toxic products ~~must~~ remain in the ground.  
Our atmosphere can no longer safely absorb  
the CO2 emissions.

Any one who cares about the future of  
our planet should understand the dangers of  
business as usual. The costs of delaying  
meaningful action continue to rise expon-  
entially.

There is no Planet B.

Sincerely — SJS
