PUBLIC COMMENTS  
DEIS Coastal Plain

3/1/2019

This is not an acceptable DEIS. All that is presented here is a simple Google search available online. This seems to be Environmental Assessment designed for BLM to declare a Categorical Exclusion and write off NEPA compliance. You have identified some impacts with absolutely no real evaluation, declare that 150 year development period is expected, state that native tribes really like this, while making sure that Big Oil wins "BIG" without holding them accountable for this disastrous initiative.

In reality, this initiative will irreparably hurt Alaska, provide a fresh supply of oil & gas for Europe and Asia at our expense and satisfy only a mix of politicians that merely want to enrich themselves and simply don't care about rivers, wilderness and wildlife....and what we all know as "Alaska"

There can be no doubt that this action will wipe out the Porcupine Caribou herd and threaten the extinction of Polar Bears in North America. To be sure collateral damage to wildlife, wilderness and wild and scenic river values will be staggering! The scattering of NSO, setbacks, probable lease terms, and other restrictions to be applied to leasing, are minor, far less than necessary, poorly thought out, lack any meaningful mitigation and serve only as a random deception to hide the full force and effect of this development!

Moreover, this action will threaten the very existence of the native tribes in Alaska.....their existence and ability to survive is totally dependant on the natural condition of the landscape. The notion that Native tribes want this and will benefit from this is a complete lie!

The 9/11 event in New York pales in comparison to the disaster created by leasing in the coastal plain. Our only hope is that Trump and his crowd are kicked out of office in 2020, the democrats take over and repeal the so called Jobs Act that created this monumental disaster! Hopefully no leasing will take place before then!
