

APR Revised Proposed Action (November 20, 2017)

APR is submitting this Revised Proposed Action to modify their Proposed Action submitted on January 23, 2017. Modifications include the addition of the Two Crow Ranch, purchased by APR in August of 2017, change in bison stocking dates on some properties and associated change in dates of work on range improvements, and reducing the proposed AUMs on APR deeded land to that arrived at using the NRCS AUM calculations for Below Normal Precipitation years.

APR proposes the BLM issue a ten-year grazing permit for Cattle and/or Indigenous Animals (Bison) on the grazing permits listed in Table 1 below. In addition, APR proposes the permits authorize year-round continuous grazing for indigenous animals and the reconstruction or construction of identified exterior fences (see Appendices A-C for more information) before the allotment is stocked with indigenous animals and the removal of interior fences (see Appendices A-C for more information) once the allotment is fully stocked with indigenous animals.

To provide further detail, APR proposes BLM authorize 31,893 AUMs on 260,893 BLM acres. APR also proposes the BLM include in the BLM allotments 29,309 acres of State of Montana DNRC land and 86,426 acres of APR deeded land for an additional 4,440 and 19,235 AUMs respectively. This equates to 4,631 Maximum Number of Animals for year-long continuous grazing on the allotments once they are fully stocked with indigenous animals. AUMs proposed are the current AUMs authorized on the BLM permits and State leases and for the deeded land they were calculated using the NRCS method for below normal precipitation years.

APR is aware the BLM has no authority to make decision regarding State of MT DNRC land or APR deeded land. However, we provide information regarding both to ensure APR's entire intent is fully explained.

Other Terms and Conditions of APR Proposed Action:

1. Add all State and APR Deeded acres to the grazing permit for each APR ownership unit. Authorize the Maximum Number of Livestock associated with all BLM, State, and APR Deeded acres within the permits because the proposal creates one pasture for all of these ownerships.
2. Split BLM East Dry Fork allotment into two separate allotments made up of: 1) Pastures 1 and 3 being an allotment called East Dry Fork with the permit issued to American Prairie Foundation; and 2) Pasture 2 being an allotment named South East Dry Fork issued to Lee Jacobs (551 AUMs) and Francis Jacobs (526 AUMs). State Leases #9266 and #9267 would also be assigned to Jacobs. It is important to note this is how the permit has been managed for at least the last four years. If Jacobs are unwilling to split the allotment another Alternative is to run APR indigenous animals in common with Jacob's cattle on the entire allotment.
3. Split Judith River Allotment into two allotments named Judith River West and Judith River East with the Judith River being the division line. The Judith River will need to be fenced out because it will not provide a natural barrier for bison movement. Given the new fencing splitting the allotment as proposed allows each side of the allotment to be more effectively managed for bison grazing in conjunction with the allotments they are most adjacent to.
4. For each BLM Field Office combine all APR's BLM allotments under a single permit once they are stocked with I (indigenous animals).
5. Authorize the construction and reconstruction of exterior fences prior to stocking the allotment with indigenous animals. Authorize removal of all interior fences once BLM allotments are stocked with I (indigenous animals). At that time remove Cattle as a livestock option for the permit. See appendices A-C for additional information.
6. Authorize the installation of double cattle guards where BLM roads intersect with perimeter fences, including where single cattle guards currently exist. APR will be responsible for installation and maintenance of the cattle guards. Double cattle guards are shown to be more effective for controlling bison movement.

7. Discontinue the existing BLM Allotment Management Plans once allotments are stocked with I (indigenous animals).
8. Manage Existing Range Improvements as shown in attached Appendix C: APR Proposed Action for Each Range Improvement and Appendix A: APR Land Unit Fence Management Maps. NOTE: Upper C.K. Creek, French Coulee, and PN allotments have no range improvements so none are listed. **Generally:** APR would retain and maintain livestock water source infrastructure; as needed existing perimeter fences would be reconstructed as per APR design, as shown in Appendices A & B, and be 100% maintained by APR; perimeter fences that currently do not exist would be constructed as per APR design, as shown in Appendices A & B, and be 100% maintained by APR; and interior fences would be removed when the property is stocked with indigenous animals.
Disclaimer: This is the best information APR can provide regarding Range Improvements with the information available to them. There may be errors in the Range Improvement data APR has received from the BLM and State but APR has used the data as the best information available. In particular legal descriptions may be incorrect, some Range Improvements may no longer exist, some Range Improvements may not be recorded, etc. The maps in Appendix A are the most accurate reflection of APR intent. If the information in the table below appears to be inaccurate compared to other information in this Proposed Action document please contact APR for clarification/corrections.

Table 1: APR BLM Grazing Permit/State Lease Requests and Comparison of Requests to Current BLM Grazing Permits/ State Leases

APR Unit Name (Which Will Become One Pasture When Stocked With Only Indigenous Animals)	BLM Grazing Allotment and /or State Lease	Pasture	*Planned Year To Start Stocking BLM Allotments and /or State Leases With I (Indigenous Animals)	Proposed Livestock		Proposed Grazing Period		Acres and Percent of Total Acres in Current BLM Permits / State Leases / APR Deeded	When APR Unit is One Pasture Acres and Percent Total Acres That Would Be On BLM Permits / State Leases / APR Deeded	AUMs and Percent of Total AUMs in Current BLM Permits / State Leases / APR Deeded	When APR Unit is One Pasture AUMs and Percent Total AUMs That Would Be On BLM Permits / State Leases / APR Deeded

*Subject to Change - With Prior Approval

** C = Cattle and I = Indigenous Animals (in this request, Bison)

*** Box Elder and Telegraph Creek Allotments are currently approved for use by I (Indigenous Animals) and a grazing season of 3/1-2/28. APR is not requesting these prior decisions be reconsidered in the analysis. This proposed action includes a recalculate the AUMS associated with private land on Box Elder and Telegraph Creek Allotments and removal of the interior pasture fences on the Telegraph Creek Allotment. These are the only items APR is requesting to be analyzed for these two allotments.

APPENDIX A: APR Land Unit Fence Management Maps

See the following pages for the Fence Management Maps for APRs ten Land Units: Beauchamp, Burnt Lodge, Upper C.K. Ridge, Dry Fork, PN, Sun Prairie, Sun Prairie North, Timber Creek, Two Crow, and White Rock

Reconstruct - Electrify Only is one subcategory of reconstruction in which the only activities are: 1) the second from top wire is replaced with high tensile electric wire; and 2) wire insulators and solar panels are installed to electrify the fence. It is shown as a subcategory of reconstruct because it causes much less disturbance than some other subcategories of reconstruct will.

Note: Other sections of perimeter fence currently shown on the maps as Reconstruct will likely be Reconstruct - Electrify Only. However, until this can be verified by an on the ground inspection APR has shown those sections in the category with the highest likely disturbance category – Reconstruct. It is most likely this situation would pertain to Burnt Lodge, PN, Timber Creek, and Two Crow Units.

Also Note: When APR reconstructs a perimeter fence, which does not belong to the BLM, they offer the salvage materials from any fence being removed to the adjacent landowner or leaser, whenever possible, and free of charge. This ensures at least a portion of the financial investment the adjacent owner or leaser had in the fence materials is returned to them. In addition, the adjacent owner or leaser benefits from a new fence at no cost to them and with no future maintenance responsibilities.

Disclaimer: The ten maps below were created with the best information APR has available using data from sources shown below in the Fence Map Date Sources below. There is a possibility there are additional interior fences not shown on the maps. If so those interior fences are also proposed for removal when the allotments are stocked with bison. It is most likely this situation would pertain to the Burnt Lodge, PN, Timber Creek, and Two Crow Units.

Fence Map Data Sources: Surface management agency (public land) and grazing allotment boundaries provided by USDOJ BLM and downloaded from www.geocommunicator.gov/GeoComm. PLSS, private land ownership (cadastral), stream, and lake data provided by

Montana State Library and available at: geoinfo.msl.mt.gov. Fence lines derived from a combination of GPS records, heads-up digitizing, and for the PN Unit only, Montana DNRC.

Fence Summary:

Total Miles of Fence Currently on the Landscape in the Project Area = 717.2

Total Miles of Fence on the Landscape in the Project Area in the Proposed Action = 453.9

Construct = 35.2 Miles

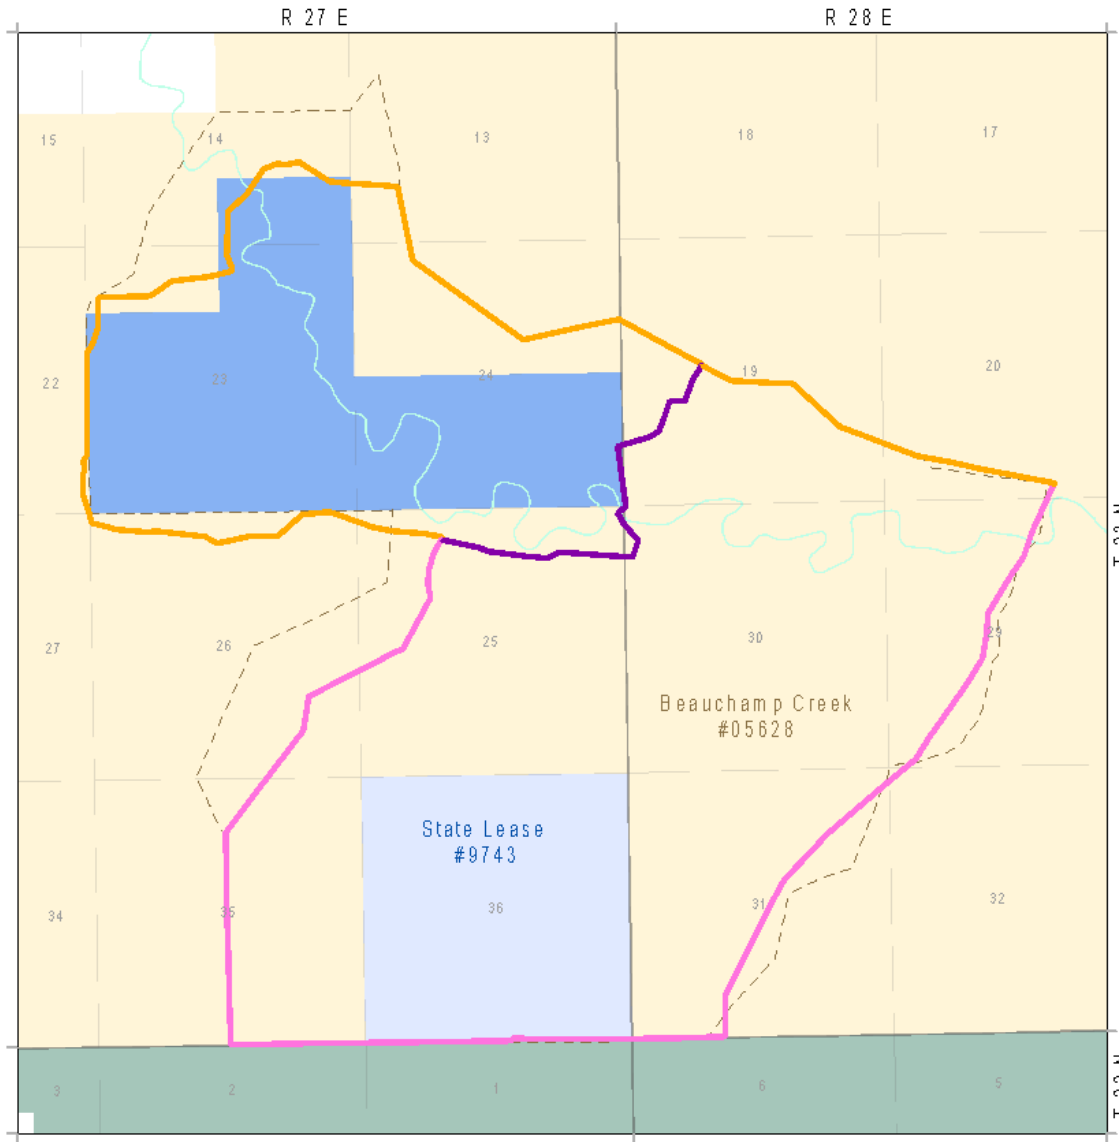

Reconstruct = 250.9 Miles (Does not include Electrify Only Subcategory Shown Below)

Reconstruct - Electrify Only = 49 Miles

Retain = 118.8 Miles

Total Miles of Currently Existing Fence Proposed For Removal From the Landscape = 298.5

	Miles Fence to Retain As Is	Miles Fence to Electrify Only	Miles Fence to Reconstruct (Does Not Include Electrify Only)	Miles Fence to Remove	TOTAL MILES FENCE EXISTING TODAY		Miles New Fence to Construct
Beauchamp	0	6.7	6.6	1.7	15		0

APPENDIX B: APR Fence Design and Maintenance

American Prairie Reserve's (APR) perimeter fencing on bison pastures was designed to meet Montana Fish Wildlife and Parks' standards for wildlife friendly fencing and the State of Montana's definition of a "legal fence". APR fence specifications are as follows: a four-wire fence with two barbed wires, one high tensile wire, and one barbless wire. The top barbed wire is 42" above ground, the high tensile electric wire is 30" above ground, the middle barbed wire is 24" above ground and the barbless wire is at least 18" above ground. T-posts are spaced 16.5 feet apart and H-braces are installed approximately every ¼ mile. The 42" top wire height facilitates wildlife movement over the fence, the 12" between the top and second wire reduces the potential for wildlife entangle of animals jumping over the fence, and the bottom wire being at least 18" above ground and smooth facilitates wildlife movement under the fence.

The high tensile electric wire is powered by solar panels. Each solar panel operates up to 10 miles of fence at 6kV to 9kV depending on lighting and weather conditions. APR has fence indicators near commonly traveled roads: if a fence has lost power the fence indicator activates a small blinking red light notifying passing employees that it has lost power.

Gates are also electrified and have an underground wire installed to allow electricity to pass through even if the gate is opened. The gate has a separate insulated handle for the electric wire. Once that handle is disengaged the gate is disconnected and ready to open with no chance of electric shock.

Auto gates are constructed to meet County requirements. They are generally at least double the length of a standard auto gate. The length is the distance of the auto gate perpendicular to the road width. This length of auto gate has been shown to be effective for bison containment. Auto gates are routinely checked and maintained by APR employees.

APR commits to perform 100% of the maintenance of all perimeter fences of areas stocked with bison, thereby relieving adjacent landowners of any fence maintenance responsibilities they would otherwise have under Montana State Statute. APR has a team of full-time and seasonal employees to oversee and maintain fences. Once bison have been stocked, APR employees routinely check fences. While checking fence, employees are looking for any problems that may render the fence ineffective, and are taking voltage readings with a fault-finder, to ensure the electric wire is working effectively. A fence maintenance logging system has recently been instituted to record each time an employee checks the fence - noting which fence was checked, voltage readings, repairs, weather, and anything else that is noteworthy.

APPENDIX C: APR Proposed Action for Each Range Improvement

Definition of Range Improvement Proposed Action Codes (dates subject to change with prior approval)

- 1 = APR Retains and Maintains Range Improvement
- 2 = APR Reconstructs and Maintains Range Improvement. For Fences APR fence design is shown in Appendix B (this category can range from entire removal of an existing fence and installation of a new fence in the same location to Reconstruct – Electrify Only which entails replacing one wire with a high tensile electric wire and installing solar panels.
- 3 = APR Removes Range Improvement
- 4 = Range Improvement is within Pasture 2 of East Dry Fork, which is to be retained by Jacobs and is their responsibility so no action is included in the Proposed Action (see 1 under Terms and Conditions of the Proposed Action.)
- 5 = BLM responsible, APR has no responsibility
- 6 = Abandon Use and Let Deteriorate Over Time

Appendix C Table: APR Range Improvement Propose Actions

APR Unit Name	BLM Allotment Number and Name or State Lease Number	Proposed Action*	Planned Year of Change to Range Improvement (Subject to Change With Prior Approval)	Project Number	Project Name	Authorization Type	Meridian	Township	Range	Section	Subdivision
Beauchamp Unit	05628 Beauchamp	1	N/A	443118	Lake Retention Reservoir	Cooperative Agreement	Montana Principal	023N	027E	025	SWSE
