Project Description

- On November 16, 2015, Crescent Peak Renewables, LLC, submitted an application to BLM requesting authorization to construct, operate, maintain, and terminate an up-to-500 megawatt wind energy generation facility—Crescent Peak Renewables (N-94470).

- The project would be located on four study areas (sites) labeled NV-1 through NV-4 and constructed in two phases.

- The project study area is 22 miles long (north and south) and 5 miles wide (east and west) covers 32,531 acres of public land and is located 10 miles west of Searchlight, Nevada.

- Crescent Peak Renewables anticipates that the final project will have a permanent disturbance of up to 750 acres.
Wind Turbine Information

- Crescent Peak Renewables, LLC is considering several potential wind turbine models with a capacity between 2.0 and 4.5 MW per wind turbine.
- The Crescent Peak Wind Project may have up to 248 wind turbines.
- The installed wind turbines would be utility multi-megawatt-class machines and would be arranged in rows in accordance with applicable industry siting recommendations for optimum energy production and minimum land disturbance.
- Each wind turbine would have a three-bladed upwind configuration.

- Final wind turbine size and design would be based on several factors, including but not limited to, terrain and required mitigation factors.
- Each wind turbine would operate as an independent generator with its own step-up transformer.

• The most effective comments identify an issue, provide rationale for the relevance of this issue and offer suggested remedies. Comments should be specific and clearly identify what the issue is, why you believe this and what can be done to fix this. Provide constructive solutions with documentation to support your suggested remedies. Comments must be relevant to the level of impact of the proposed action and relevant to NEPA.
